

Nitrogen Dioxide (NO₂) Effective Date Advisory

Effective January 1, 2007, all diesel retrofits that are installed on diesel vehicles and equipment must be in compliance with the NO₂ emission limit in the Air Resources Board's (ARB) diesel retrofit verification procedure (Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines, Title 13, California Code of Regulations, sections 2700-2710). Please be aware that this compliance deadline applies to the date of installation of a diesel retrofit, not the date of sale. Verified diesel retrofits that do not comply with the NO₂ emission limit and are installed prior to January 1, 2007, may remain in service. Within a few days of the January 1, 2007 deadline, ARB will update the listing of verified retrofits on its webpage (<http://www.arb.ca.gov/diesel/verdev/verdev.htm>) to show only those systems that are compliant with the NO₂ emission limit.
